

“Lose 20 kgs (44lbs)
and tone your body
within 4 weeks in
your very own
**Suspense Aquatic
Centre – I did.”**

Brian Gay, Inventor

SUSPENSE AQUATIC CENTRE

“I designed the **Suspense** aquatic centre for people like me that work 7 days a week and have very little time or interest in going to gyms or public pools. My outdoor pool is un-inviting most days due to the weather conditions.

I tried running, walking and often suffered from injury, tight muscles, aches and pains – not to mention sweaty, wet clothes – no thanks! I knew water was the answer for me, so I designed **Suspense** to be a convenient volume of water.

I simply step into **Suspense**, close the door behind me and within minutes fill to the desired level with crystal clear temperature controlled water.”

NO WASTING WATER

Suspense relies upon recirculated water that is stored, automatically **filtered, heated** and **sanitized** – the water is re-used time and time again as in a commercial swimming pool. The water is simply transferred from the storage tank to the booth and back again.

WORK-OUT

Deep water running for cardio, resistance training to tone your body and stretching to remain agile – you choose. Your body is up to 90% lighter in water making exercise NO IMPACT avoiding shock and jolts to bones, muscles and ligaments that occur when exercising on land. The faster you move through water the greater the resistance, it's like having an automatic self adjusting weight machine that caters instantly to your needs.

CONVENIENCE

Getting in shape and keeping fit has to be enjoyable and most of all convenient. With a **Suspense** aquatic centre exercise has never been so convenient, clean and refreshing try it and see for yourself. **Suspense** may be installed inside or outside the building, whatever is convenient for you.
