

SUSPENSE ABOVE GROUND AQUATIC CENTERS FOR HEALTHCARE, SPORT AND HOME USE

Deep water centers to shallow water treadmills,
Suspense is the latest innovation in aquatic convenience!

Above Ground Installation

Suspense is a world first revolutionary approach to aquatic treatment and fitness conveniently assembled above ground and operational within hours, allowing your clients a private aquatic work-out hygienically and with an energy and water-wise approach! Above ground installation results in a significant cost saving as there are no excavation requirements and in addition to this, **Suspense** can be relocated within hours so if you move or expand your business – **Suspense** can go with you, in-ground pools simply do not allow this flexibility!

Variety of use

A versatile aquatic system that enables the development of a vast range of treatments and activities designed specifically for the Wellness, Medical, Sports and Fitness industries.

Deep Water

Suspense deep water centers have been designed to enable even the tallest occupant to deep water run. The center fills within minutes, water depth is adjustable at anytime making variances to the workout efficient and flexible. In addition to deep water exercise, VERTICAL FLOATATION sessions can be experienced. The application of de-tox materials, mud's, seaweeds, vitamin and medicants to the occupants skin can be contained within the float aqua-liner, without water contamination. The warm water compresses the aqua-liner onto the body, assists in the infusion process and without doubt heightens the relaxing and de-stressing experience. A hand shower is incorporated within the center for easy wash off following floatation or exercise, for hygiene purposes this water is directed to the drain.

Optional heights are available to suit application.

KNOW THE DIFFERENCE™

'SUSPENSE' ABOVE GROUND ASSEMBLY MEANS NO EXCAVATION COSTS

Shallow Water

Suspense shallow water centers also allow the development of full aquatic exercise programs and have the added option of a variable speed treadmill incorporation. Again, like the deep water center, water depth is fully adjustable at anytime. The length of the center allows horizontal stretching and horizontal kicking exercise.

Clear Vision

All walls are clear glass so that full activity of the occupant can be monitored by performance coaches, physical therapists etc. Activity can be recorded without the need for expensive underwater camera equipment – simply use a standard land based camera. The clear walls also provide a comfortable environment for the occupant – no claustrophobic feeling.

Water & Energy Wise

All water is stored in separate tanks where it is heated, treated and filtered for safe, hygienic use. As the water is stored in enclosed tanks, evaporation is minimal compared to high evaporation of open surface pools, because the water is stored in enclosed tanks, considerably less energy is consumed in order to maintain water temperature.

Adjustable Water Temperature

Suspense incorporates an efficient heating system to maintain working water temperature. Water temperature can be set from ambient to 40° Celsius (104°F).

Optional water storage and chiller packs can be added to the **Suspense** specification allowing chilled water fills – systems can have warm and chilled water available to suit application.
